Lippincott Professional Development Collection is an online, evidence-based, clinical education and competency validation solution that offers continuing education for your staff and optional integration with your facility LMS.

It consists of over 350 clinically focused courses covering 38 subject areas—including specific programs for Mandatory Education, Compliance and Patient Safety, ECG Competency, and Hospital-Acquired Conditions, as well as more specialized programs such as those supporting initiatives around Heart Failure and Stroke.

Lippincott Professional Development Collection courses are specifically designed to:
• ensure staff competence
• increase clinical knowledge
• optimize nursing performance
• improve patient outcomes.

Clinical nursing educators benefit by having a collection of cost-effective, up-to-date, online education programs that easily integrates with LMS systems, enabling them to streamline and customize staff education programs, track learning progress, and ultimately ensure competency.

Nurses and clinicians at hospitals using Lippincott Professional Development Collection benefit by having instant, online access to evidence-based courses that will allow them to satisfy CE requirements and gain knowledge in additional specialty areas.

For additional learning and remediation, we’ve integrated over 6,500 high-yield information links to sister point-of-care products, Lippincott Procedures and Lippincott Advisor, augmenting the knowledge obtained from each course and, empowering nurses to change their behavior at the patient’s bedside.

The Lippincott Professional Development Collection’s platform includes lite-LMS administrative functionality which makes it easy to assign courses, track completions, and manage overall staff competency. For facilities that prefer to use their own tracking system, Lippincott Professional Development Collection offers AICC-compliant LMS integration.

"For clinical educators, Lippincott Professional Development Collection makes it easy to support and educate our staff. Before having Lippincott, we created our own content. This was very time consuming, and a lot of work to continually update.

Lippincott Professional Development Collection is always up-to-date, and always evidence-based. Whenever we see someone struggling, or if we have someone on a performance plan, we assign them the relevant LPD modules to help strengthen their skills and confidence. It is so easy to assign to our staff."

—Sheila Blackmur, MSN, RN-BC, CMSRN, Clinical Educator and Beth M. Weese, MSN, RN, CCNS-BC, Clinical Educator Southwest General Health Center Middleburg Heights, OH
Lippincott Solutions and Joint Commission Resources (JCR) have teamed up to provide eCourses for nurses and other hospital personnel that promote Patient Safety and Compliance and support Disease-Specific Care certification in Heart Failure and Stroke.

The Lippincott Solutions development team uses leading clinical experts to write and review course content. As the official publisher of The Joint Commission, JCR uses The Joint Commission’s experts to verify that the courses meet accreditation and certification requirements.

Maintaining Compliance with National Guidelines

Each dynamic online learning course contains a variety of case studies, competency assessments, and tutorials delivered in easy-to-use, interactive formats. Pretests and Posttests, embedded self-assessments, video, images, charts, and audio add realism and improve information retention.

Ultimately, the Lippincott Professional Development Collection courses, developed in partnership with JCR, are designed to be meaningful educational refreshers for boosting clinical competence and staying up to date with CE credit requirements.

Heart Failure Disease-Specific Care Program
(Joint Commission Resources)

With the aging population growing, the prevalence of heart failure will undoubtedly increase. This program offers your staff the latest details on signs, symptoms, and risks of heart failure, pharmacologic and nonpharmacologic management of heart failure, advanced and basic diagnostic testing, special populations, and more.

Stroke Disease-Specific Care Program
(Joint Commission Resources)

Stroke is one of the leading causes of death in the United States. This online learning program offers your staff the latest details on the signs, symptoms, and risks of complex strokes, hemorrhagic stroke pathiophysiology and treatment, ischemic stroke treatment, stroke prevention, acute neurologic complications, discharge planning, pharmacologic therapies, rehabilitation and recovery, and more.

Patient Safety Program
(Joint Commission Resources)

Ensuring the consistent safety of patients is one of the biggest priorities for U.S. hospitals. This program offers your staff the latest details on understanding patient safety such as reducing the risk of patient falls, improving the safety of medication use, improving caregiver communication, improving patient identification accuracy, and more.

Compliance Program
(Joint Commission Resources)

Failure to comply with federal regulations can result in considerable financial consequences for facilities. This program offers your staff the latest details on catheter-associated urinary tract infection prevention, pressure ulcer care and prevention, hand hygiene, surgical site prevention, prevention of health-care associated infections with multidrug-resistant organisms, and more.

Highlighted Programs
Don’t miss some of our leading programs within the collection.

Specialty Training Programs
These programs are designed to educate and evaluate appropriate nurse diagnoses, assessments, and interventions associated with the care of a patient. They target clinical needs of a particular care area, sub-speciality department, or clinical subject. The nursing specialties included are general medical-surgical nursing, cardiovascular care, critical care, obstetrics, pediatrics, behavioral health case studies, neurologic care, orthopedic care, infection control, hospital-acquired conditions, assessment, heart-failure disease specific care, leadership and management, pain management, wound care, long-term care, and stroke disease-specific care.

ECG Interpretation Program
These programs include interactive tutorials designed to explain how to accurately interpret basic and 12-Lead electrocardiography (ECG) rhythm strips, as well as basic and advanced breath and heart sounds. Also covered are the anatomy and physiology of the cardiac system, heart, respiratory system, and the cardiac cycle. Additionally, the interpretation programs provide interactive clinical tutorials that focus on complex assessment techniques.

Preceptor Preparation Program
This program teaches experienced nurse employees how to serve as preceptors for new nursing hires, student nurses, or staff nurses transitioning to a new department. This program includes unique courses that provide the educational foundation for aspiring nurse preceptors to be successful in this role, including roles and responsibilities, principles of adult teaching and learning, assessment and planning, implementing and evaluating, and dealing with difficult situations.

Address Key HCAHPS Initiatives
HCAHPS scores affect not only federal reimbursement, but a facility's public reputation for quality patient care. These courses were designed to support the foundational requirements of HCAHPS patient surveys, with competency training in key survey areas such as communication, pain management, communication about medications, and discharge information. Courses cover subjects such as effective communication with patients, pain assessment, pharmacologic and nonpharmacologic pain intervention, stroke prevention and discharge planning, reducing the risk of patient falls, preceptor preparation, patient-and-family centered care, and more.
